

# Auto Top Up Systems

## Reef-Fill Compact

Infrared water level monitoring and Auto Top Up System.

- Professional, low voltage auto top up incorporating an advanced monitoring system with dual infrared optical sensors.
- Ideal for topping up evaporated water in advanced marine and freshwater aquariums.
- Infrared optical sensor accurately monitors the aquarium or sump water level.
- Secondary infrared optical sensor provides reliable safety back-up.
- Advanced Smart Monitoring System - monitors all water levels and prevents pump running dry, with audible and optical alerts.
- Built in communication capability allowing the Reef-Fill Compact to be integrated with future technologies [additional equipment required - not supplied].
- Supplied complete with an energy efficient 3.5w 12v DC brushless pump capable of 200 l/hr [max head 2m].
- Includes 2m of 6/9mm flexible top up hosing, antisiphon valve and hose securing clamp.
- Compact magnet mount sensor bracket suitable for aquariums up to 12mm thick.
